Participation meeting

Executive Summary in English (03.02.2026)
Based on Participation Meeting (27.02.2026)

La version française est disponible sur GitHub.

Die deutsche Version ist verfügbar auf GitHub.

Introduction

Tiziano Esposito, BO RFD,
Federal Office of Information Technology,
Systems and Telecommunication

Greeting message

Michael Schöll,
Director Federal Office of Justice

Agenda for the morning

09:20 e-ID and trust infrastructure: Progress status and implementation planning

10:05 System demo (e-ID issuance and swiyu Check)

10:25 World-Café pitches

10:30 Break

11:00 World-Café

12:00 Lunch

World-Café 11:00 – 12:00

(on-site only)

Program e-ID Rolf Rauschenbach, FOJ	Room 01.535
From Pilot to Production Environment Michel Sahli, Swisscom	Room 01.536
DPSS – Identity management and e-ID Marcel Kessler, GS-FDF	Conference Hall
swiyu Issuer & Verifier Journey Zoé Blanchard, FOITT	Room 01.540
Use Cases & Credential Catalogue Vasily Suvorov, Accelerate.swiss	Room 01.541
swiyu in the financial sector Stefan Knaus, BEI ST. Gallen AG	Room 01.542

Agenda for the afternoon

14:05 Proof of concept for electronic high school diploma

14:30 Anchoring global aviation security in the swiyu trust infrastructure: The IATA ASTF initiative

15:00 Break

15:30 Further development of the swiyu ecosystem

16:00 Research on e-ID privacy and security

16:15 e-ID Challenge: Award ceremony and closing

16:30 Apéro

e-ID and trust infrastructure

Progress status and implementation planning

Urs Paul Holenstein, FOJ
Rolf Rauschenbach, FOJ

Press release from 25th February 2026

Published on 25 February 2026

Strengthening acceptance of e-ID with additional measures

The acceptance of the government's electronic identity card (e-ID) among the population is to be further strengthened in light of the close referendum result. At its meeting on February 25, 2026, the Federal Council was informed about the corresponding adjustments to the e-ID. The focus is on data protection, transparency, and security in its application.

Agenda

- Report by the Swiss Federal Audit Office (SFAO)
- Introduction date
- Scope of functions when the e-ID act comes into force
- Additional measures to protect privacy and increase security
- Choosing the identifier technology
- Internal federal test stage for online issuance
- News regarding Public Beta
- Questions & Answers

Report by the Swiss Federal Audit Office (SFAO)

- The e-ID program is regularly reviewed by the SFAO as a **key project** (BK-DTI)
- The latest EFK report refers to the status between **August 4 and September 9, 2025.**
- The e-ID program **agrees with all EFK recommendations and is implementing them.**

IT PROJECTS

AUDIT

Introduction date

We aim to bring the e-ID act into force on **December 1, 2026,** and to start issuing e-IDs. This is subject to the following conditions in particular:

- **Security requirements** are met,
- **Accessibility** is guaranteed,
- **Voting rights concerns** are clarified.

The **Provision of the trust infrastructure will take place in stages** for example:

- Issuance of e-IDs will not be instantaneous initially but will be subject to a waiting list.
- We are considering allowing entries by issuers and verifiers in the registers in stages.

Function scope upon entry into force of the e-ID Act

swiyu Version 1.0

- Secure and accessible swiyu Wallet
- Secure and accessible swiyu Check
- Online e-ID application via swiyu wallet
- Unlinkability of the e-ID
- Additional measures to protect privacy and enhance security
- swiyu Support
- Swiss Profile 1.0 in all components
- Software parts lists published

Future features

- On-site identity verification
- Offline verification of documents
- Federal backup service
- 100% open source swiyu wallet
- e-ID in third-party wallets (BGEID Art. 18, par. 4 and 5)

Additional measures to protect privacy and enhance security

Which issuers and verifiers can interact with the swiyu wallet?

To date

Maximum transparency

All issuers and verifiers can interact with the swiyu wallet, even those without an entry in the base and trust registers.

→

New

A high level of trustworthiness, exclusions are possible in all cases

Only issuers and verifiers (with UID) who are registered in the basic and trust registers can interact with the swiyu wallet.

What do verifiers need to declare in the trust register?

To date

Only details regarding identity

→

New

Verifiers are also required to register the data they intend to request, and for what purpose.

Wallet notifies users if verification requests differ from the registered scheme.

What happens if sensitive data is requested?

To date

The owner sees a notification and can accept or reject the data request. In certain cases, a warning is also displayed, requiring further interaction to disclose the data.

→

New

In exceptional cases, the swiyu wallet should be able to automatically block data sharing (e.g., AHVN13 query without legal grounds; “ZAS list”)

The owner does not have to click away a warning and cannot agree to disclose the data.

How are violations detected and sanctioned?

Intervention and control: The implementation of the additional measures significantly improves the risk situation, as issuers and verifiers can be reliably identified, addressed, and, if necessary, intervened by the Federal Office of Justice. The following escalation levels are in place to enforce compliance:

- **Non-Compliance notice**: Inclusion of non-compliant issuers and verifiers in a publicly accessible directory. A corresponding warning appears in the swiyu wallet..
- **Deletion from the trust register**: Removal of the issuer or verifier from the trust register. They can no longer interact with the swiyu wallet.
- **Deletion from the base register**: Removal of the issuer or verifier leads to complete exclusion from the system; in particular, their identifier can no longer be retrieved.

e-ID in third-party wallets

To date

The e-ID Act states that third-party wallets can be reviewed and approved. The preliminary draft of the implementing provisions for the e-ID Act does not contain any requirements in this regard, and there are currently insufficient resources available for reviewing and approving third-party wallets.

→

New

The issuance of e-IDs on third-party wallets will not be possible once the e-ID Act comes into effect.

Selection of identifier technology

What are identifier?

- An identifier is a **unique identifier**.
- In the context of the trust infrastructure, it is the **digital address of issuers and verifiers**.
- The issuer or verifier is in possession of **the private key** that belongs to the identifier. This allows them to **prove control over an identifier cryptographically**
- Identifiers are portable and persistent. Even if the technical infrastructure changes, they remain stable.
- There are different identifier technologies, in particular
  - Public Key Certificates (**X.509**): EU approach
  - **DIDs** (Decentralized Identifiers): Previous approach of the federal government

Possible Identifier-Strategies

	Variant	Explanation	Technical interoperability with the EU
1	«DID only»	Current DID approach	**Not supported**
1+	«Dual System» DID + *add-on*	Current DID approach+ (partial) EU interoperability stack	**Partially supported** (e-ID vs. PID only)
2	«EU-Stack» X.509	Adopt the EU tech stack	**Supported** (all VCs)

Identifier strategy of the federal government

- The federal government is sticking to **DIDs** for the introduction of e-ID
- Implementation of additional **risk-minimizing measures** for DIDs, particularly with regard to security (e.g., external security screening before go-live)
- Further implementation depends on financial and political conditions.
  - **Dual system DID + EU add-on**
  - Switching to **X.509 remains an option in the long term**. A switch would have major consequences for all issuers and verifiers.

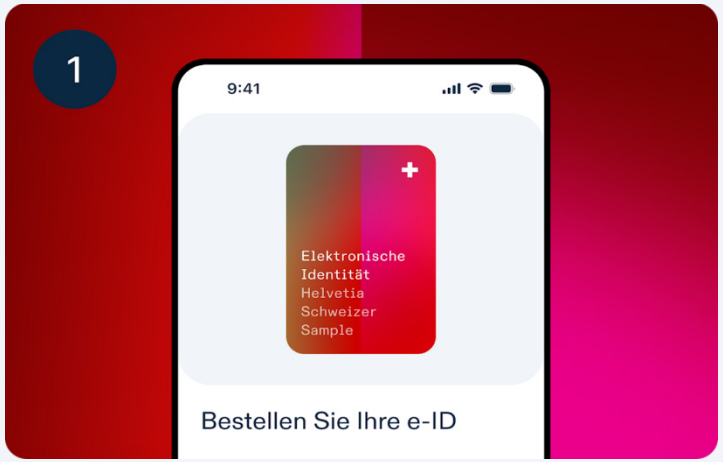
This strategy

- minimizes financial and operational **risks**,
- enables **early use** of e-ID and the trust infrastructure, and
- at the same time keeps the option of a later **EU integration open**,
- without generating high **costs or dependencies** in the short term.

Internal federal test stage for online issuance

Internal federal test stage for online issuance

- Before the launch of the e-ID, the **online issuance process** will be **tested** on a large but limited scale within the federal government.
- Target group: **Federal government employees** (approx. 40,000 people)
- The legal basis is Art. 34 para. 4b DSG.
- The e-IDs will be issued in the **productive environment**.
- These **(test) e-IDs** will be **revoked** before the law comes into force.
- The number of test persons will be increased **gradually** (e-ID > FOJ > fedpol > FOITT > all federal administrative units)
- Test period: **July 2026** until launch



News regarding Public Beta

«Contract» step for «access token request incorrect content type»

- All issuers must update to at least version 2.1.1 of the Generic Issuer
- Starting with the next release (around mid-March), swiyu wallet will only support the correct implementation

› Link on GitHub Issue: https://github.com/swiyu-admin-ch/swiyu-issuer/issues/112

New repositories for test applications

- /swiyu-generic-application-test: End-to-End tests against generic issuer und verifier
- /swiyu-generic-test-wallet: Frontend for testing credentials and deep links

Further development of the swiyu ecosystem

Daniel Säuberli, DIDAS
Kristof Hertig, digitalswitzerland
Daniel Galley, BJ

e-ID and ecosystem – both equally important

Government issued e-ID
Trust infrastructure

- **Legal** basis
- Protection of **privacy** thanks to technical and human trust mechanisms

Ecosystem
electronic verification

- Benefits from the same protection of **personal privacy**
- Promotes open and verifiable **data exchange**
- Enables **innovation**

Aspiration levels in the ecosystem

Aspiration level 1

Government issued e-ID

Secure, seamless identity verification

e-ID

Aspiration level 2

Other government credentials (federal, cantonal, municipal)

Secure, seamless digital e-Government processes

eLFA, mDL, proof of residence, criminal record extract, diplomas etc.

Aspiration level 3

other private credentials (society, economy) B2C, B2B, B2G

Secure, seamless, digital processes

Membership card, access authorization, concert ticket, health insurance card, pension statement, etc.

The role of the e-ID unit

The e-ID unit coordinates the implementation of the swiyu ecosystem across the three levels of ambition and is responsible for communication with the general public. It has dedicated staff for this purpose. As coordinator, the e-ID unit is responsible for the vision, objectives, and governance.

Walid Ahmed
Responsible e-ID Ecosystem Integration

Daniel Galley
Responsible e-ID Ecosystem Engagement

Rolf Rauschenbach
Deputy Head of e-ID Unit
Communication Officer e-ID

swiyu Ambassador

Who is a swiyu Ambassador?

- The Federal Office of Justice awards this label in recognition of **non-profit organizations** that, through their commitment, make an exceptional and effective contribution to the acceptance of e-ID and the trust infrastructure.

- These organizations maintain regular **exchange** with the Federal Office of Justice.

- The awarding of the label does **not imply any financial compensation** from the federal government. The label may also be withdrawn

Digitalswitzerland is swiyu Ambassador

In recognition of its unwavering commitment to date and planned activities for the future, including:

Retrospective

- **Visibility and dialogue with the public:** provision of public platforms and continuous positioning of e-ID and swiyu at major national digital events
- **Technical and political context:** information offerings for the public and the economy, particularly in the context of the vote on e-ID.
- **C-level mobilization:** targeted involvement of decision-makers to promote the acceptance and rapid integration of swiyu in Swiss organizations.

Outlook

- **Sector-specific roundtables:** calls for information specific to each sector in close collaboration with the Swiss Confederation and DIDAS.
- **Swiss Digital Summit:** May 26, 2026, in Andermatt.
- **digitalswitzerland Forum:** scheduled for September 2026.
- **Memorandum of Understanding (MoU):** commitment by leaders to adopt the swiyu Wallet.
- **Synergies:** cross-sector links with national priorities such as AI, cybersecurity, literacy, and education.

swiyu Orchestrator

Who is a swiyu Orchestrator?

- The Federal Office of Justice awards this label in recognition of **non-profit organizations** that have the necessary **skills** and are **committed** to coordinating the implementation of the ecosystem with dedicated resources.
- These organizations maintain ongoing **exchange** with the Federal Office of Justice.
- The label should only be awarded to **a small number of actors** and may be withdrawn.
- The awarding of the label **does not imply any financial compensation** from the federal government.

DVS and DIDAS are swiyu Orchestrators
