Trust Flow Diagram Repository

For the Swiss National Trust Infrastructure

DIDAS

swissinformatics.org

SI

Presented at the

Partizipations-Meeting

Bundesamt für Justiz, Fachbereich e-ID

by Nora Sleumer (SI) and Axel Schild (DIDAS)

Introduction by Daniel Galley (BJ)

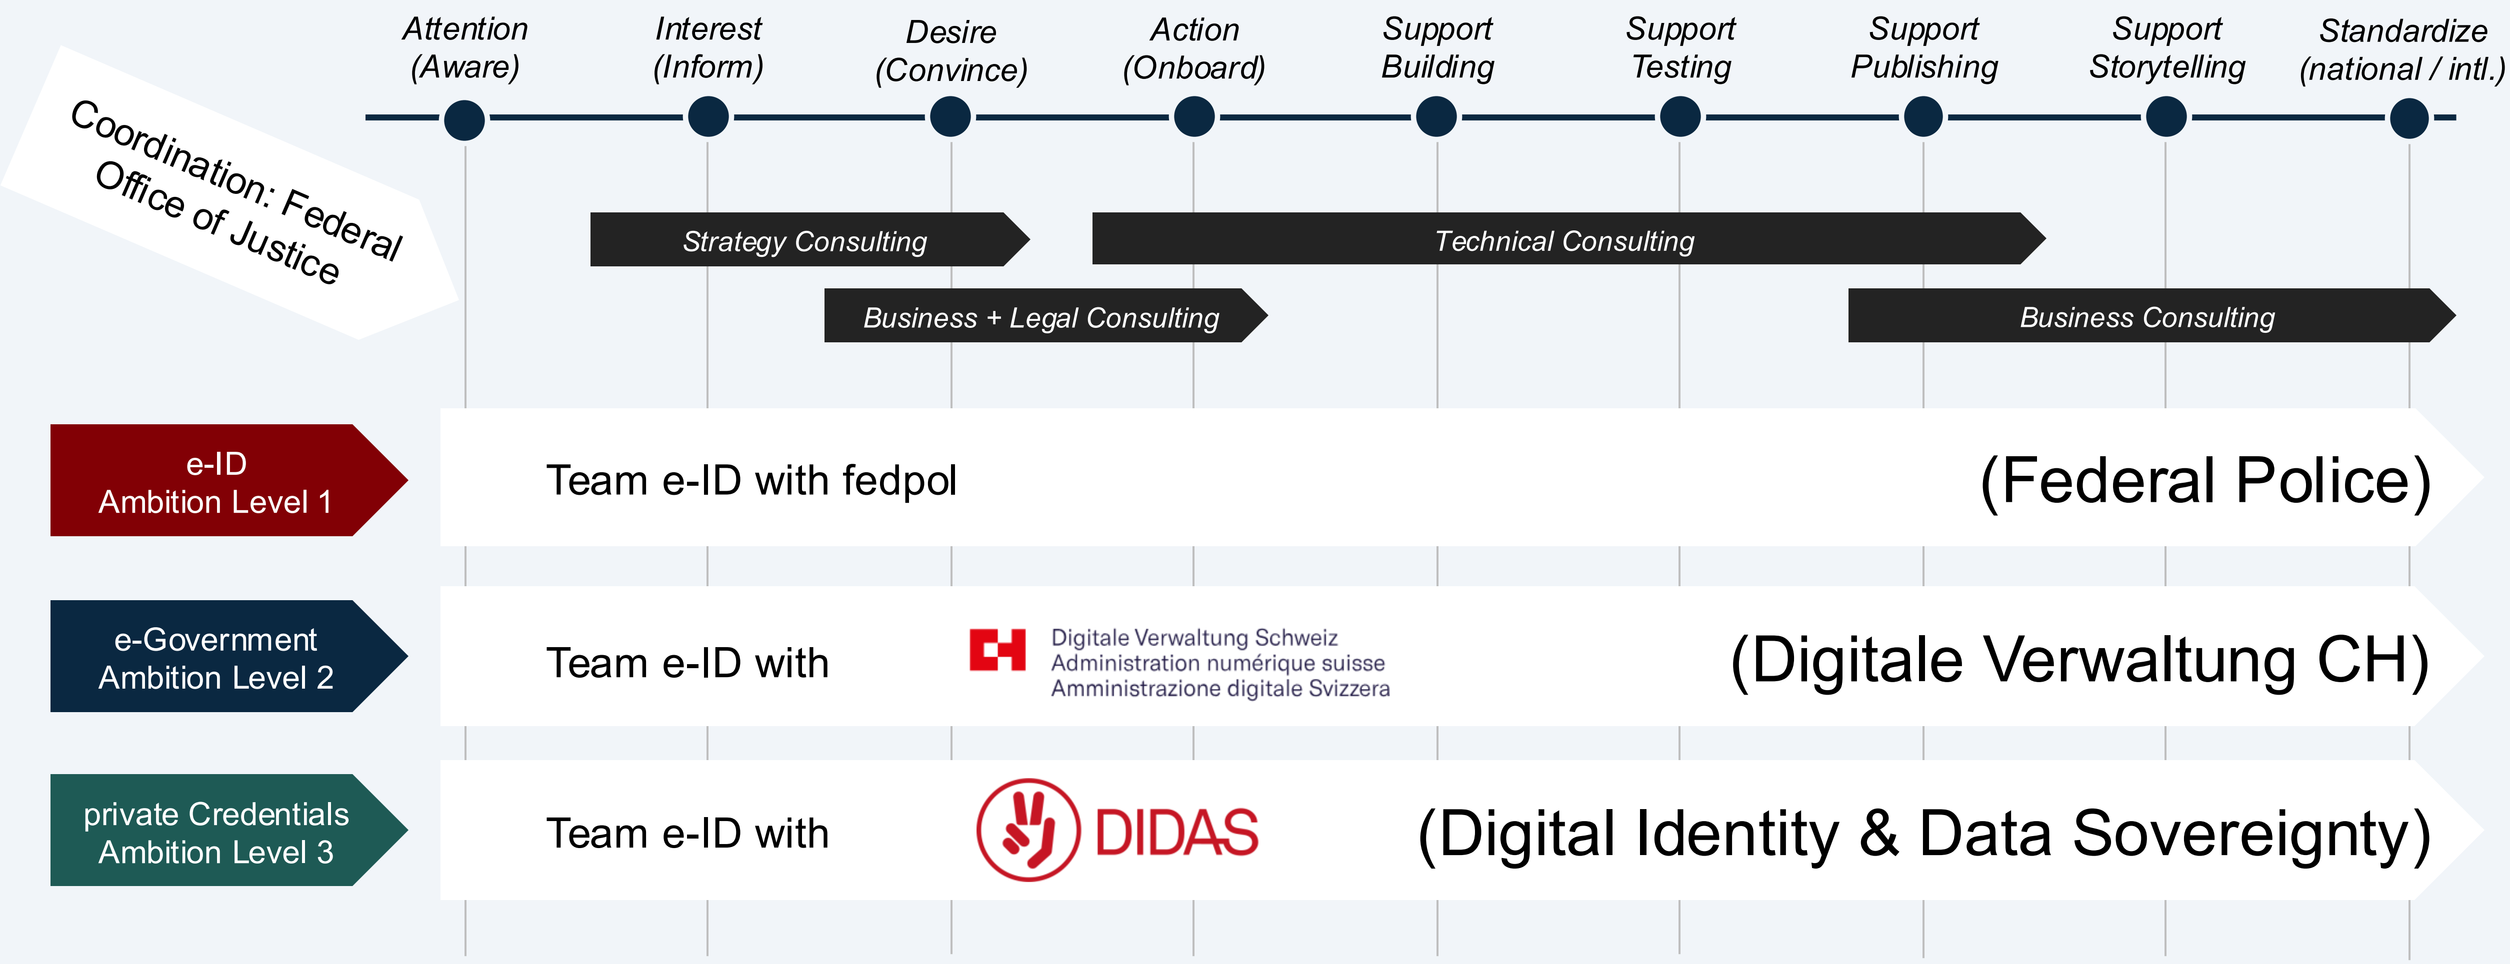
4th June 2026

Agenda

Trust Flow Diagram Repository:

- Context
- Motivation
- Concept
- Example: Education – University Onboarding
- Work in Progress
- Learnings & Benefits
- Call for Collaboration

DVS and DIDAS are swiyu Orchestrators



DIDAS Launchpad Activities

Resources that are aimed at the concrete needs of Businesses

Attention (Aware) — *Interest (Inform)* — *Desire (Convince)* — *Action (Onboard)* — *Build Support* — *Support Testing* — *Support Publishing* — *Support Storytelling* — *Standardize (national / intl.)*

Ecosystem Activation

- A wide range of regular events to get people engaged with the E-ID and Trust Infrastructure Ecosystem

Use Case Validation

- Prioritization to identify useful Use Cases
- Workshops to support the implementation of PoCs with input from DIDAS Working Groups and other Organizations

Onboarding & Ecosystem Development Support

- Provide Business, Governance and Technical Support
- Create artefacts and community tools for implementing the use cases
- Provide Onboarding Support for Issuers & Verifiers
- Cross-sector Alignment (Standards & Governance)
- Identify Areas for Further Investigation

Standardization Champion

- Catalog of Virtual Credentials
- Value Stewardship
- Enable Organizations to be a Data Steward
- Support Swiss-wide Standards Catalogs
- EU Interoperability

Trust Flow Diagram Repository

DIDAS Launchpad Activities

Resources that are aimed at the concrete needs of Businesses

Attention (Aware) — *Interest (Inform)* — *Desire (Convince)* — *Action (Onboard)* — *Build Support* — *Support Testing* — *Support Publishing* — *Support Storytelling* — *Standardize (national / intl.)*

Ecosystem Activation

- A wide range of regular events to get people engaged with the E-ID and Trust Infrastructure Ecosystem

Data Flow Diagrams make processes clearer and more comprehensive

Use Case Validation

- Prioritization to identify useful Use Cases
- Workshops to support the implementation of PoCs with input from DIDAS Working Groups and other Organizations

Data flow dependency identification supports the development of the Proof of Concepts and help to calculate costs and benefits

Onboarding & Ecosystem Development Support

- Provide Business, Governance and Technical Support
- Create artefacts and community tools for implementing the use cases
- Provide Onboarding Support for Issuers & Verifier
- Cross-sector Alignment (Standards & Governance)
- Identify Areas for Further Investigation

Data Flow Diagrams provide support by identifying the interfaces between components and defining the protocols needed to allow for the transmission of the required data

Standardization Champion

- Catalog of Virtual Credentials
- Value Stewardship
- Enable Organizations to be a Data Steward
- Support Swiss-wide Standards Catalogs
- EU Interoperability

Data Flow Diagrams illustrate the flows so they can be easily compared and standardized. They are the Use-Case foundation for Ecosytem Discovery.

Added value thanks to DIDAS' coordination

Don't Fragment. Do Unite - Trust Flow ***Artefacts.***

For Economic Actors

- Solve Concrete Problems Collaboratively
- Develop Common Standards
- Clear Dependency Identification
- Faster Time to Market and Scalability
- Reduced risks and lower costs
- Identify new areas of research
- Definition of requirements for government and private certifications

Trust Flow Diagram Repository

Who is proposing the Trust Flow Data Repository:

Dr. Nora Sleumer

- Vice President of the Swiss Informatics Society (SI)
- Co-Head of WG Trust Flows (DIDAS)

- Until March 2025 Initiative Manager for the PCI4 Program, UBS Card Center
- Before that developer, project and program manager at Credit Suisse and other companies for 25 years
- Master of Mathematics from the University of Waterloo in Canada
- Dr. sc. techn. ETHZ in Theoretical Computer Science (Computational Geometry) in 2000

Dr. Axel Schild

- Innovation Developer e-ID, Verifiable Credentials, and Digital Trust Infrastructures at Adnovum
- Co-Head of WG Trust Flows (DIDAS)

- Since 2022 Identity & Access Management Engineer, Consultant & Project Manager with focus Financial Services & Public Sector.
- Academic background in Theoretical Chemistry and Molecular Physics, happy to again have a future topic with impact.
- Active as working group lead in the DIDAS and the Open Banking Project to get the ecosystem started.

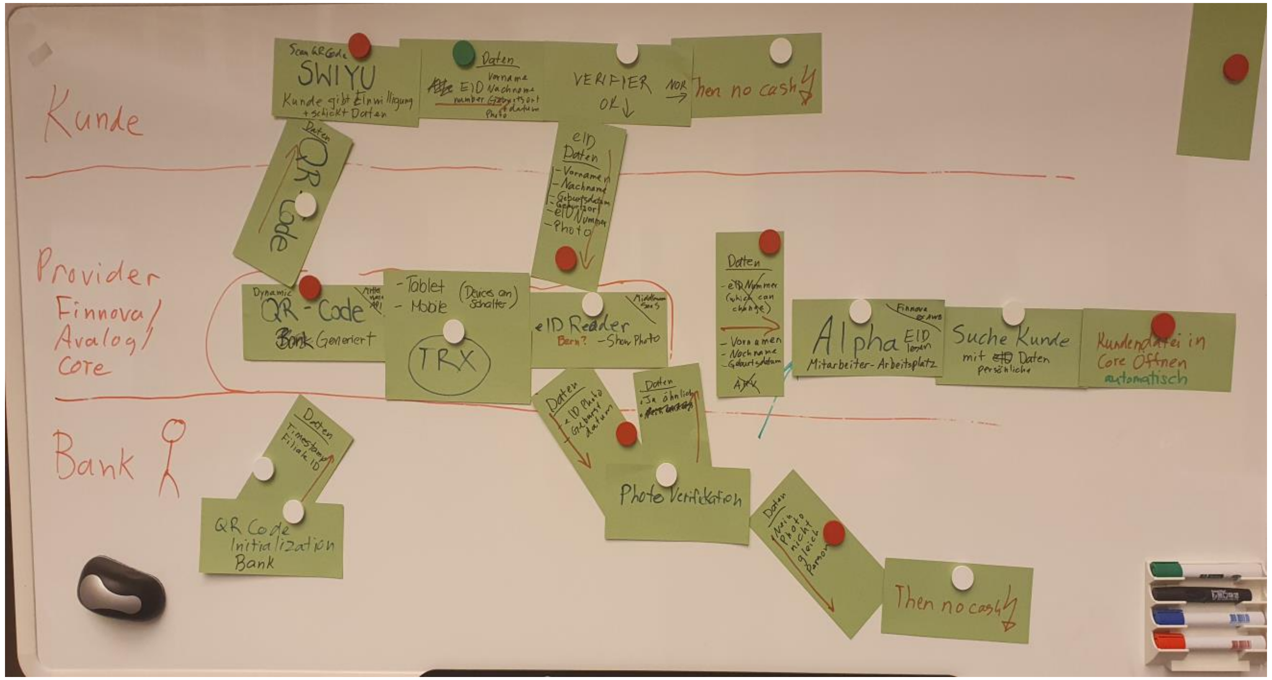
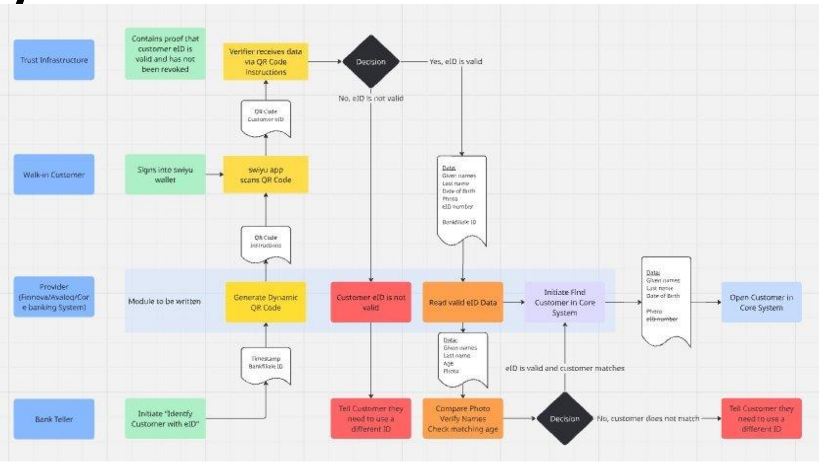
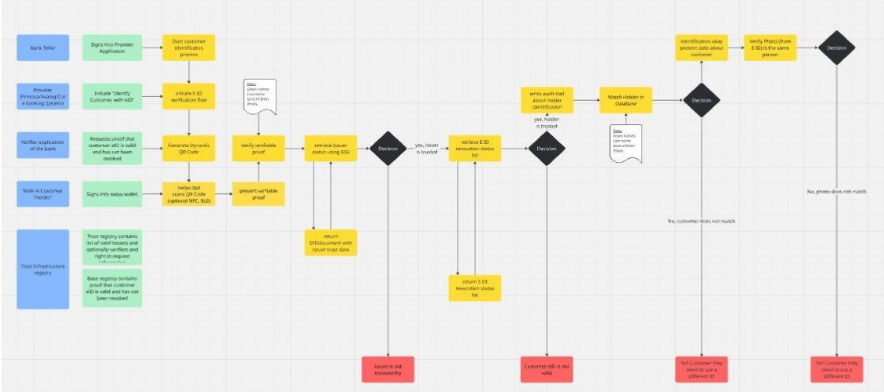
Trust Flow Diagrams – Motivation: Understanding at the next level of Granularity



Initial Brainstorming at an OpenBankingProject Workshop of the "Client Walks into a Bank and identifies themselves with E-ID"

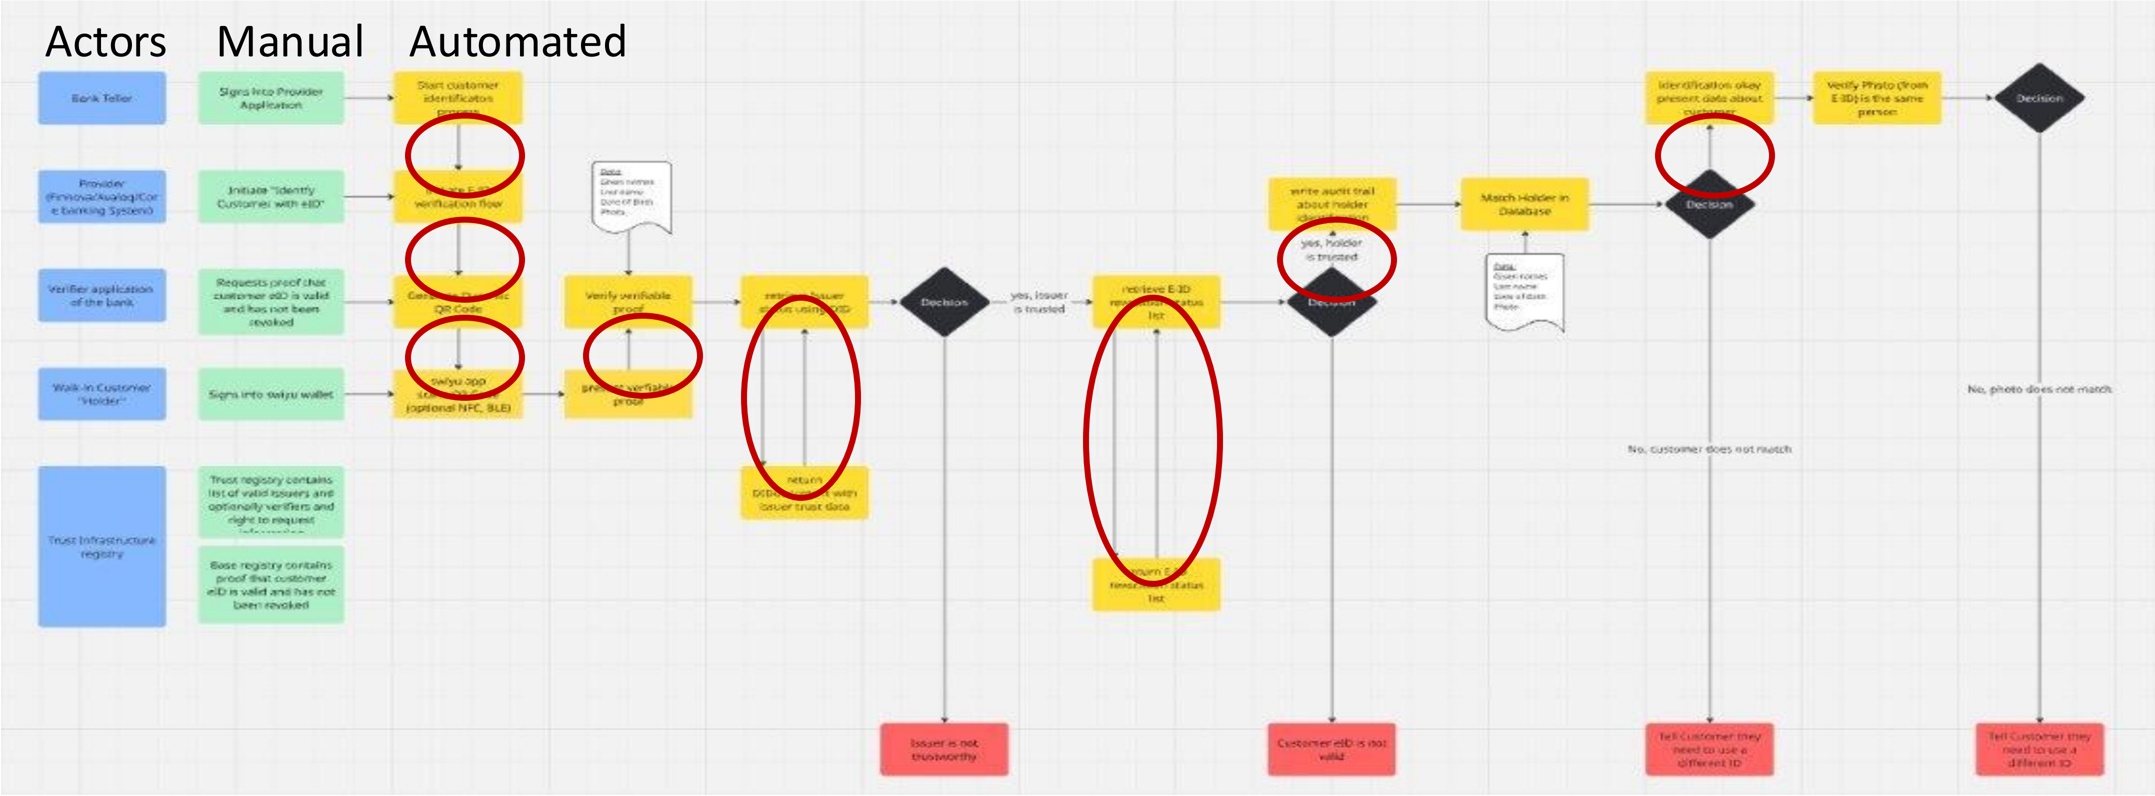


First Version: identify areas of confusion



Second Version: create more clarity

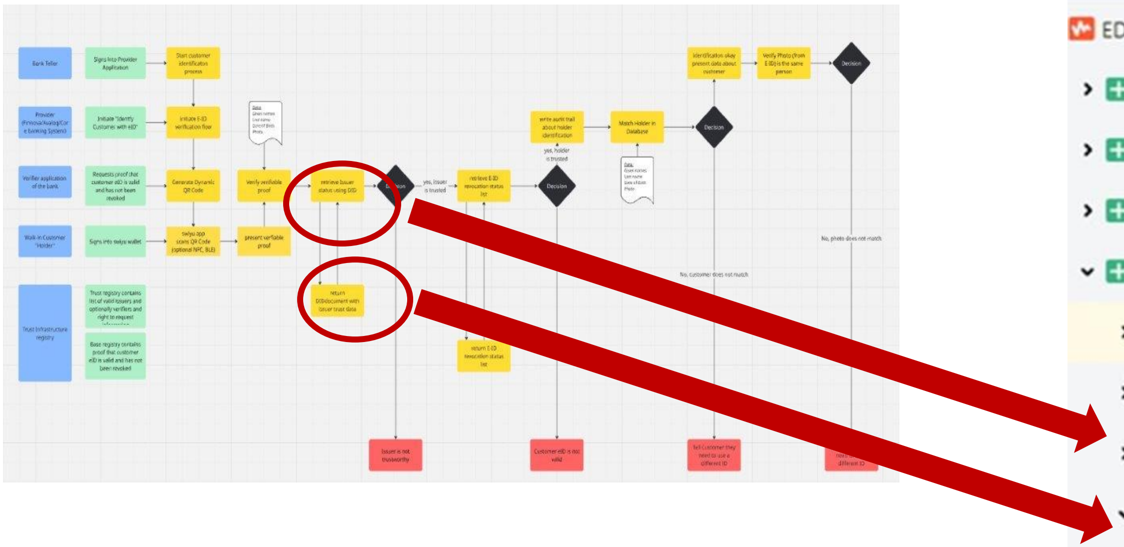
Trust Flow Diagrams – Motivation:
Using Flows to Identify Dependencies and Manage Interfaces

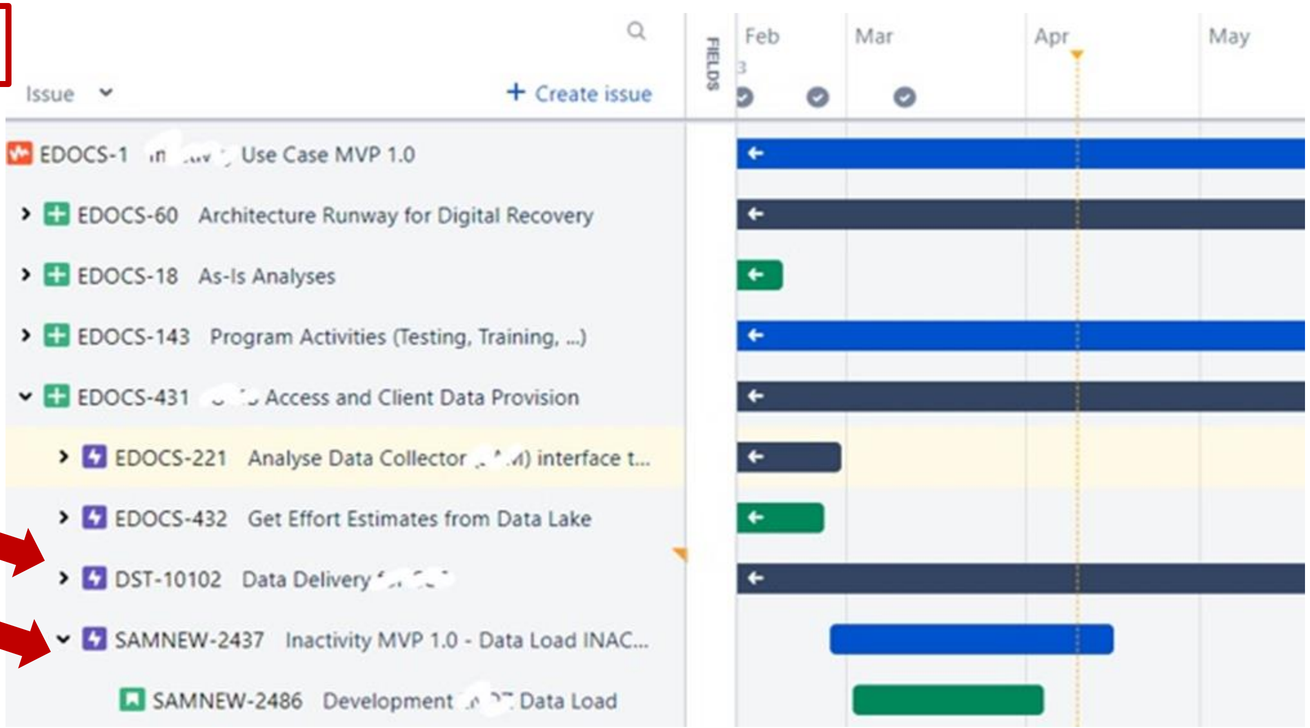


Each arrow between components belonging to different Actors is an external inter-entity dependency that requires a well-defined Interface. Standardized interfaces can lead to protocols that are nationally and internationally accepted.

Trust Flow Diagrams – Motivation:
Using Connected Process Steps to Plan the Implementation

Each process step could be an Epic in the backlog.

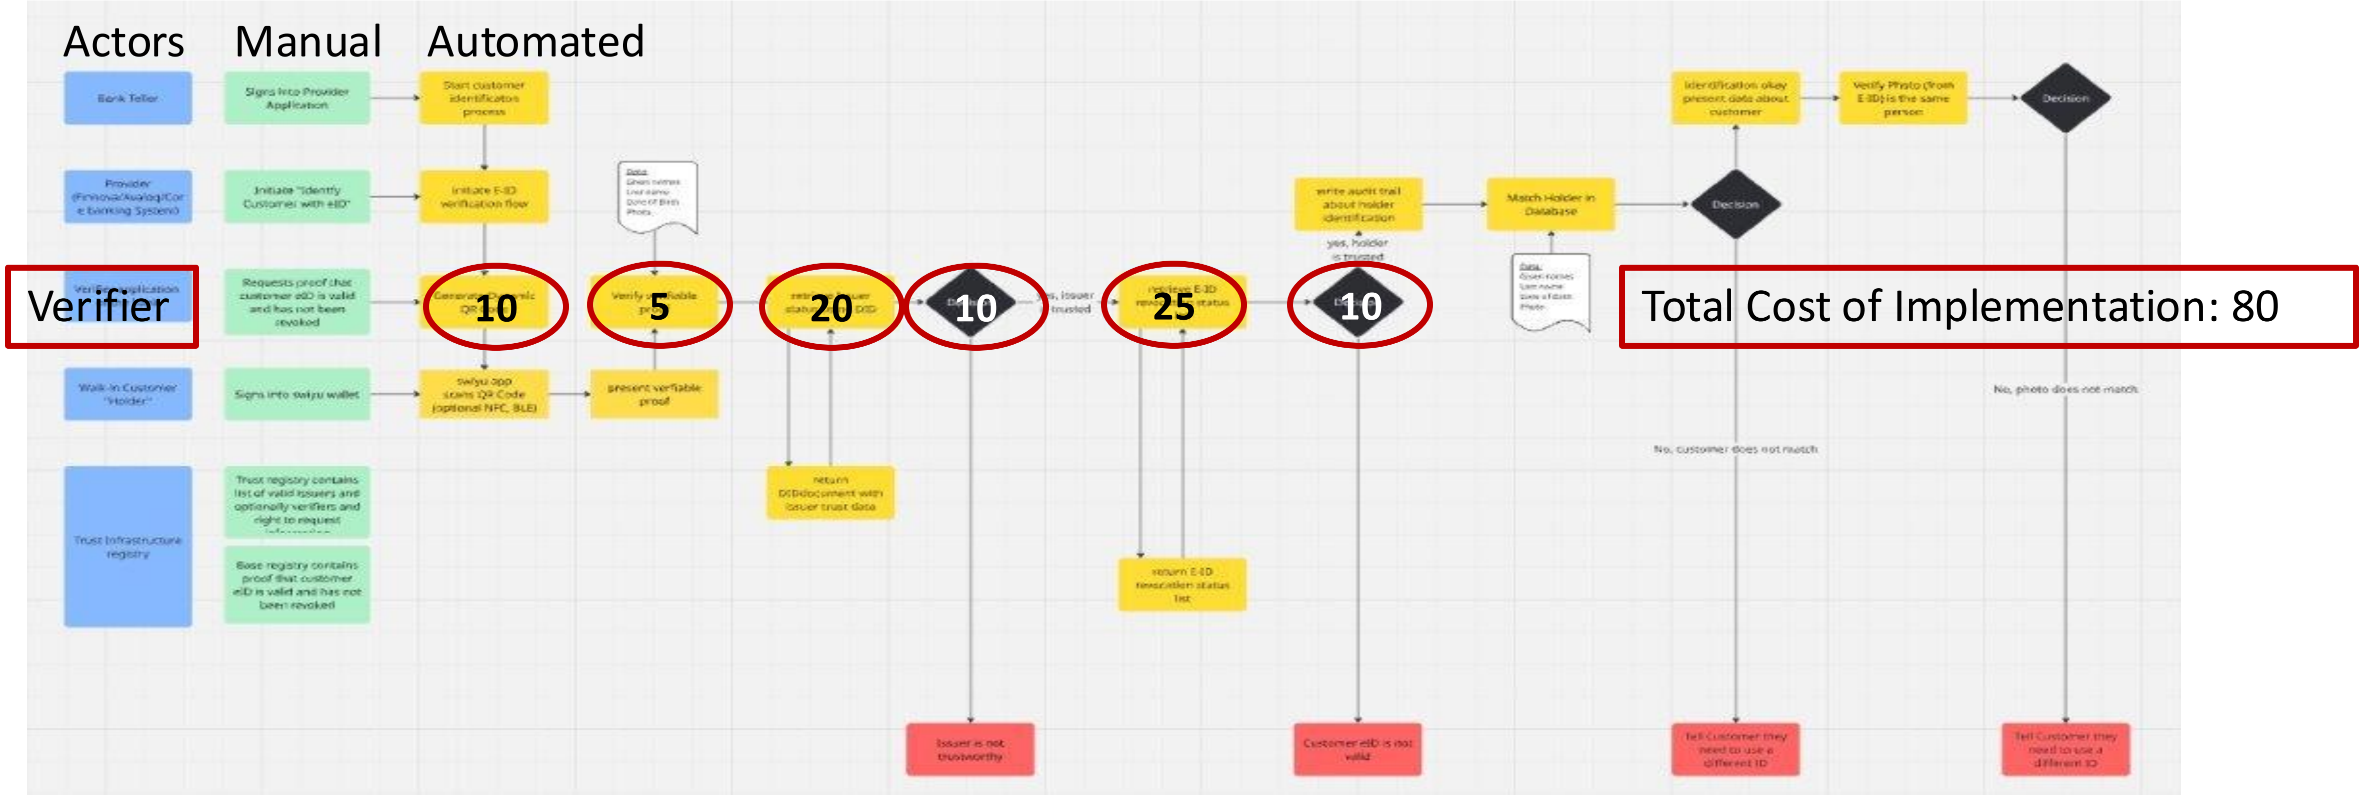




From Data Flows to Coordinated Planning, Implementation and Deployment: Every arrow in the flow requires aligned implementation, testing and deployment cycles

DIDAS

Trust Flow Diagrams – Motivation:
Using Actor-specific Process Steps to Calculate Costs and Benefits



Every automated step (yellow box) requires effort to be implemented. Estimating the cost of each step and summing them all up gives a first total cost estimate that can be used to support the business case for each actor.

Trust Flow Diagram Repository

What: Flow Diagrams (Data, Processes, Actors, Flows, Patterns)

- to create a common understanding of the components, actors and interactions
- to support the design, implementation and delivery of "trust flows"

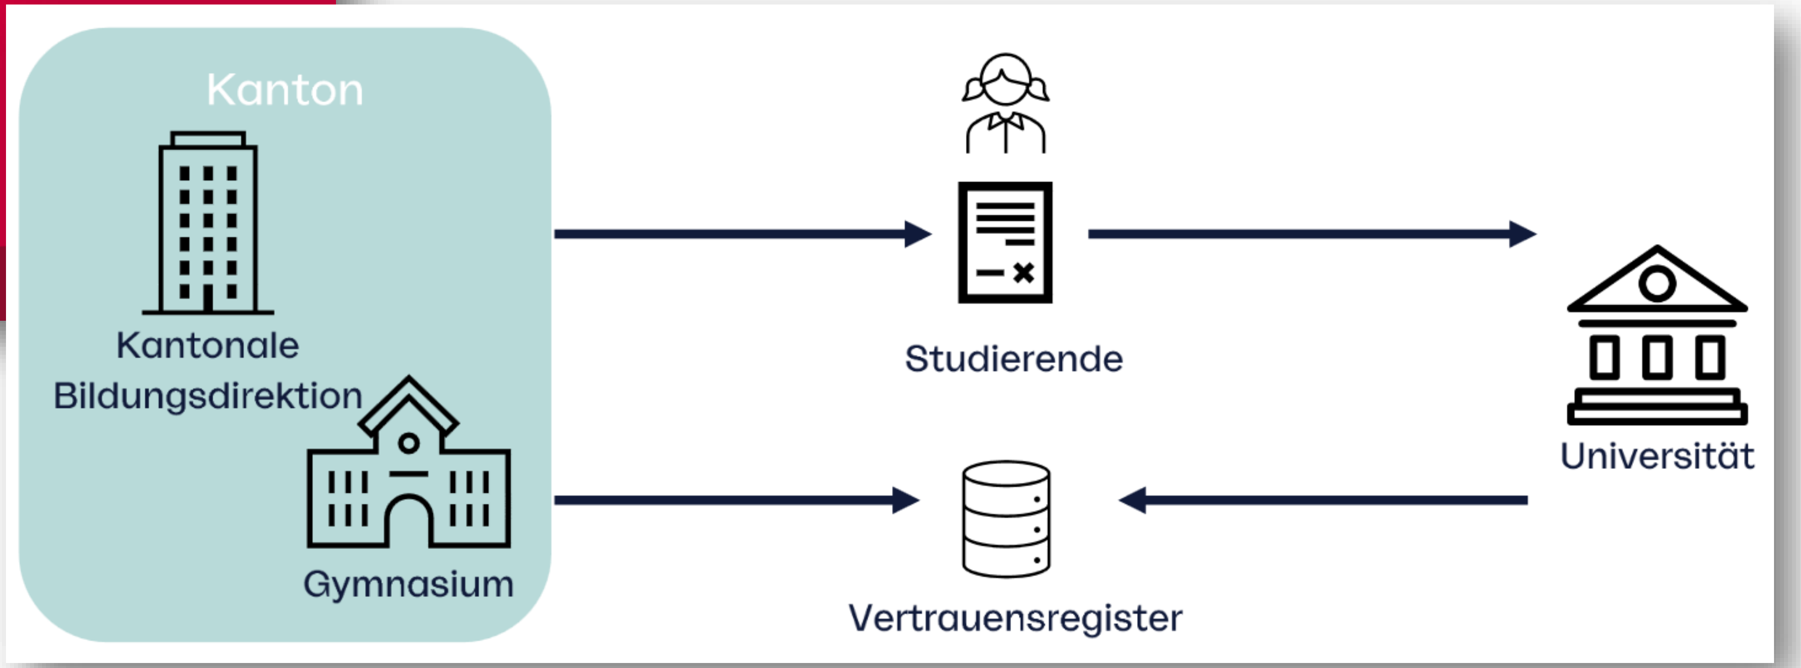
Why: To support the adoption of the trust infrastructure by

- making it transparent what needs to get done
- illustrating where the costs and benefits are
- identifying dependencies on other actors
- encouraging dialog & make current ideas concrete

For whom:

- Delivery managers, program/ project managers, product managers
- Business Analysts, Enterprise and Solution Architects
- People who want to explain in more detail how the Swiss Trust Infrastructure works
- Decision Makers

Example: Education – University Onboarding (Use Case) Presented at the Partizipations-Meeting 27. Feb. 2026



Proof of Concept was presented by Kevin Saner (Educa)

Example: Education – University Onboarding (Collaboration)

How we collaborate

- find a group of interested people
- draft the flow on a Miro board
- review the flow with target group
- transfer the flow to LikeC4/Mermaid
- publish the flow on the DIDAS repo

Kevin Saner (Educa)

Davide Ravasi (Switch)

Matteo Demasi (Sapio)

Example: Education – University Onboarding (Collaboration)

How we collaborate

- find a group of interested people
- draft the flow on a Miro board
- review the flow with target group
- transfer the flow to LikeC4/Mermaid
- publish the flow on the DIDAS repo

DIDAS

Example: Education – University Onboarding (Collaboration)

How we collaborate

- find a group of interested people
- draft the flow on a Miro board
- review the flow with target group
- transfer the flow to LikeC4/Mermaid
- publish the flow on the DIDAS repo

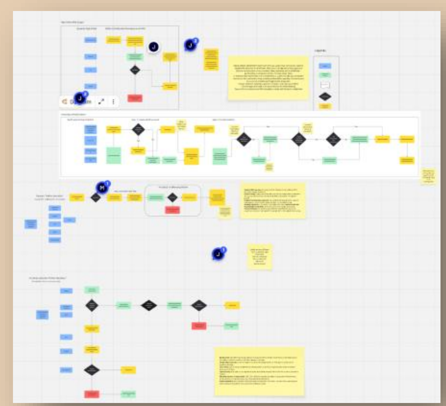
DIDAS Working Group "Trust Flow Diagram Repository"



Maturity levels

1. Use case discussion
2. Draft on Miro
3. Reviewed round passed
4. Published on DIDAS repo
5. Confirmed implementation

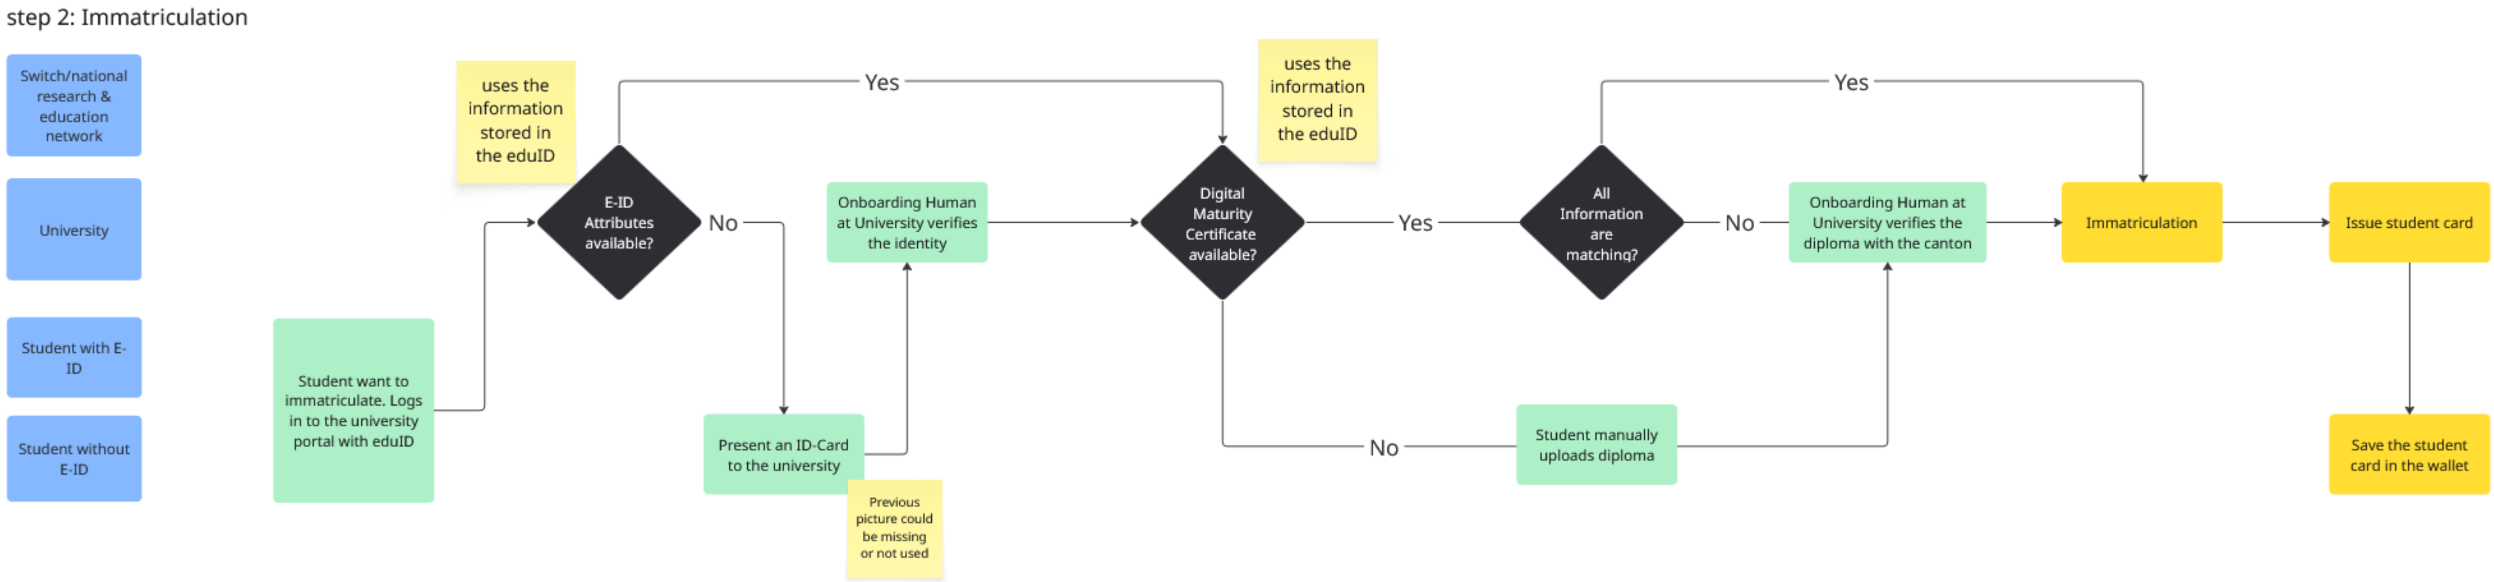
DIDAS

Example: Education – University Onboarding (Trust Flow)



Business case:
Implementation costs vs.
savings by automation &
trusted data

Work in Progress (in the flow)

Flows in progress

- Education High school diploma issuance
- Education University onboarding
- Education Enrollment for further education
- Education Document issuance further education
- Banking Branch Walk-in
- Banking Online Re-Identification
- Banking KYC Credential

Flows in ideation

- Renting an apartment
- Health Vaccination Journey
- …
- Your idea!

Who also contributed

- Stefan Knaus (Open Banking Project)
- Michal Jarmolkowicz (Swisssafe)
- Vasily Suvorov (DIDAS, Accelerate)
- Peter Janes (DIDAS, Abdagon)
- Jan Carlos Janke (DIDAS, HSLU)
- Daniel Säuberli (DIDAS, Accelerate)
- Eva Selamlar (Eurospider)
- Pirmin Zimmermann (LUKB)

Learnings & Benefits

The first flow is always wrong; several iterations are needed.

Participation in the discussions with different experts has value by itself.

The flows generate business ideas and highlight open questions.

The discussions are a lot of fun!
